1. LAB03: CI és Statikus technikák feladatok

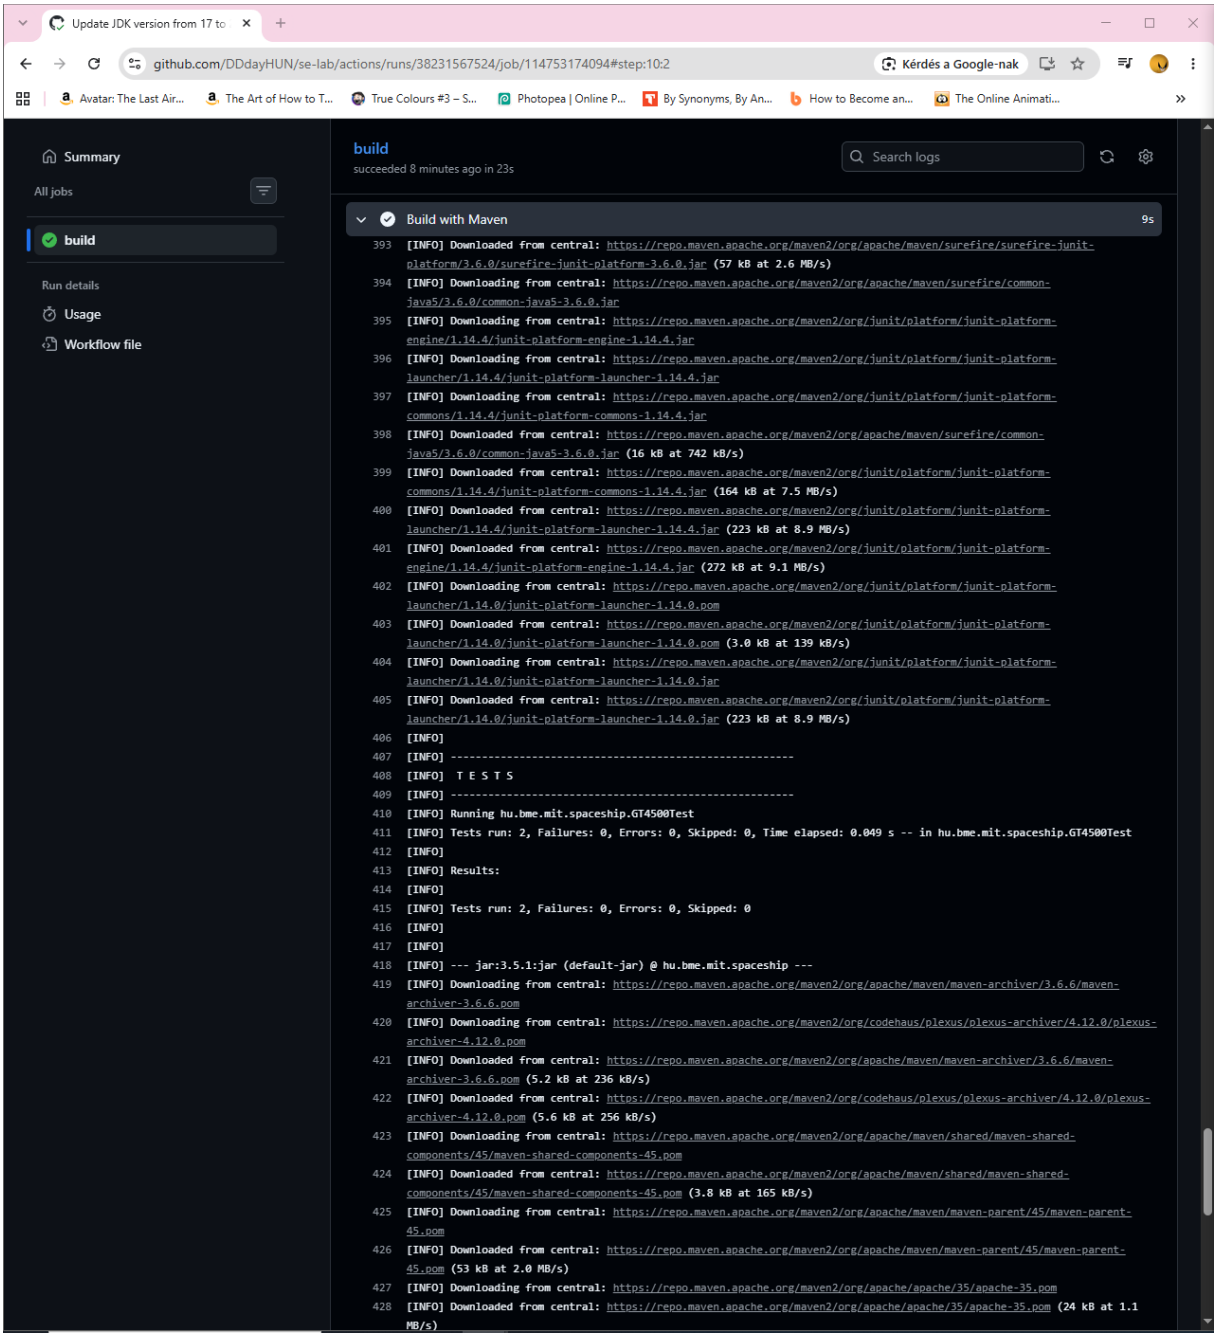

Jegyzőkönyv

Antalics Péter (R29SVR)
2026. október 12-13.

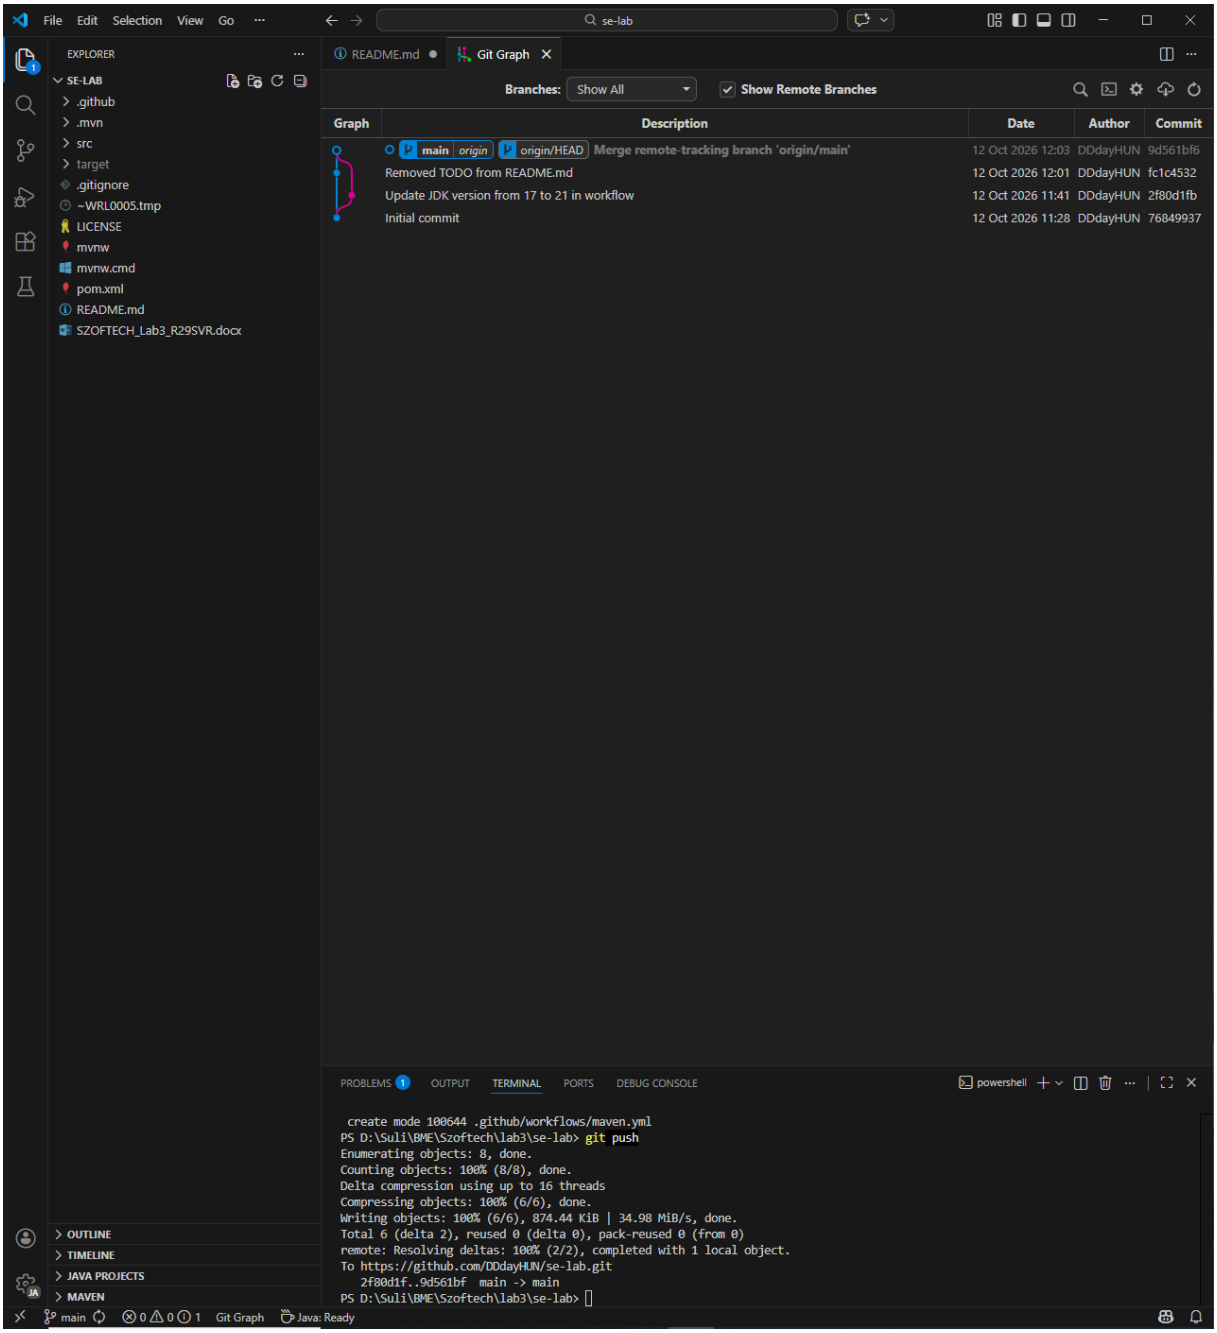

1. Feladat: GitHub tároló létrehozása

2. Feladat: CI feladatok (GitHub Actions)

3. Feladat: Távoli Git kezelés: eltérés a lokális és távoli ág között

4. Feladat: SonarQube for IDE (Statikus ellenőrzés lokálisan)

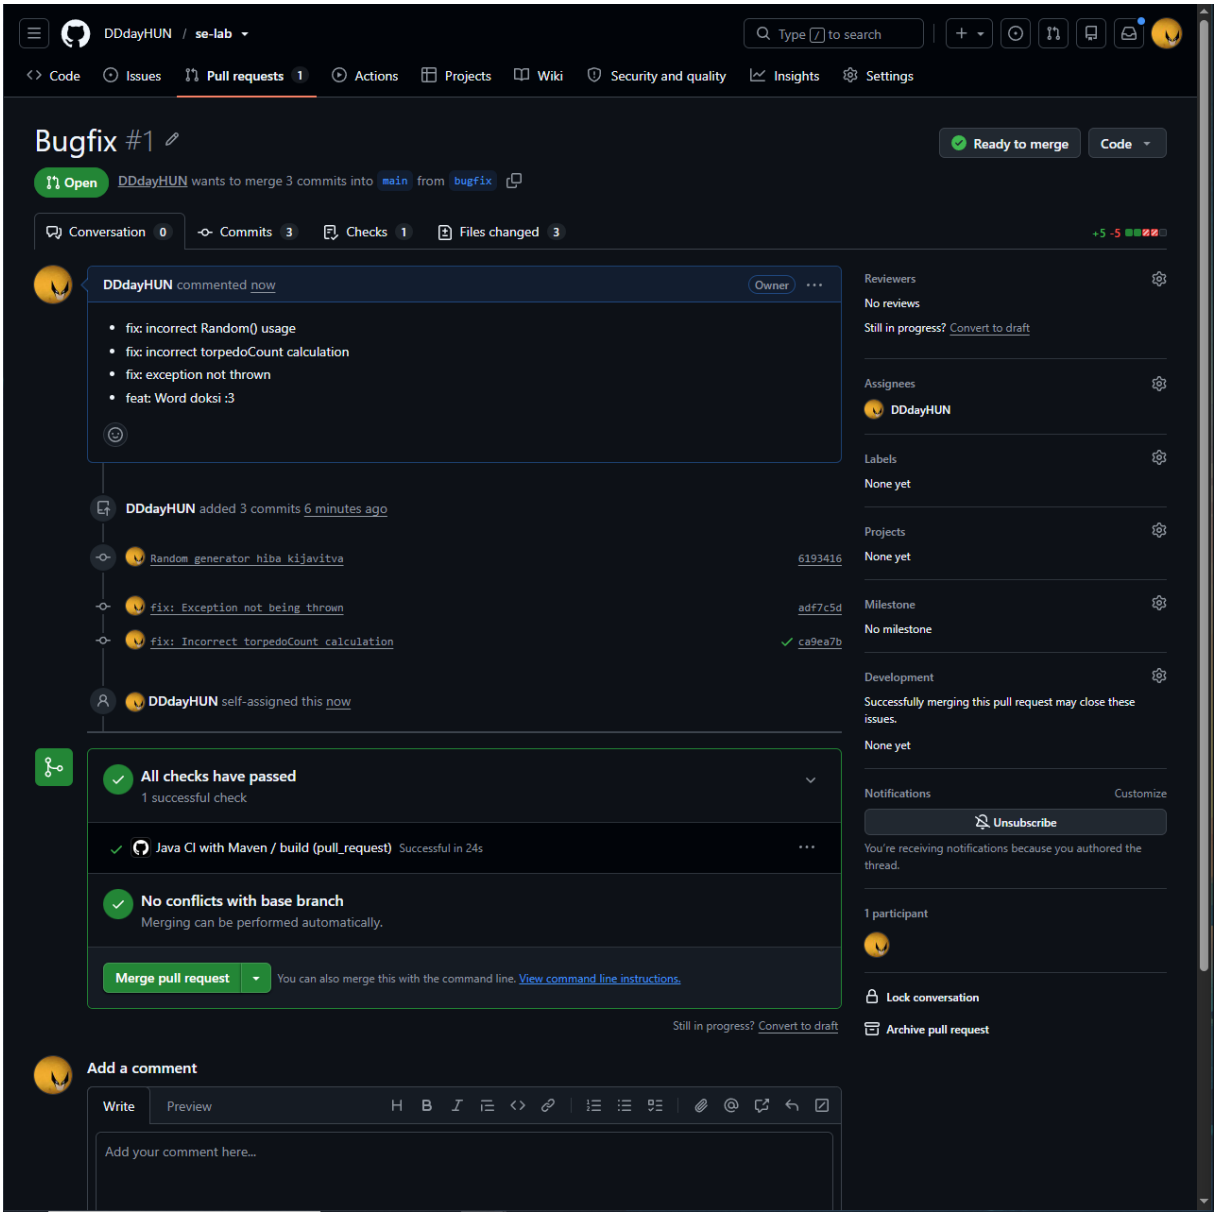

Hibák:

1. Throw this exception or remove this useless statement. --- Ez egy valós hiba, az Exception csak egy üres „statement” ezért kell javítani.
2. Save and re-use this "Random". --- Ez JDK platform dependent, hogy tényleg random lesz-e a kimeneti eredmény, a SQ recommendation az az, hogy mentsük el és használjuk fel újra, ezért ezt én hibának vélem, mivel nem platform indpendent a működés és unintended sideeffect.
3. Was "-=" meant instead? --- Ez egy valós hiba, mivel minuszá tesszük a torpedoCount-ot nem kivonunk belőle.

Szabályok:

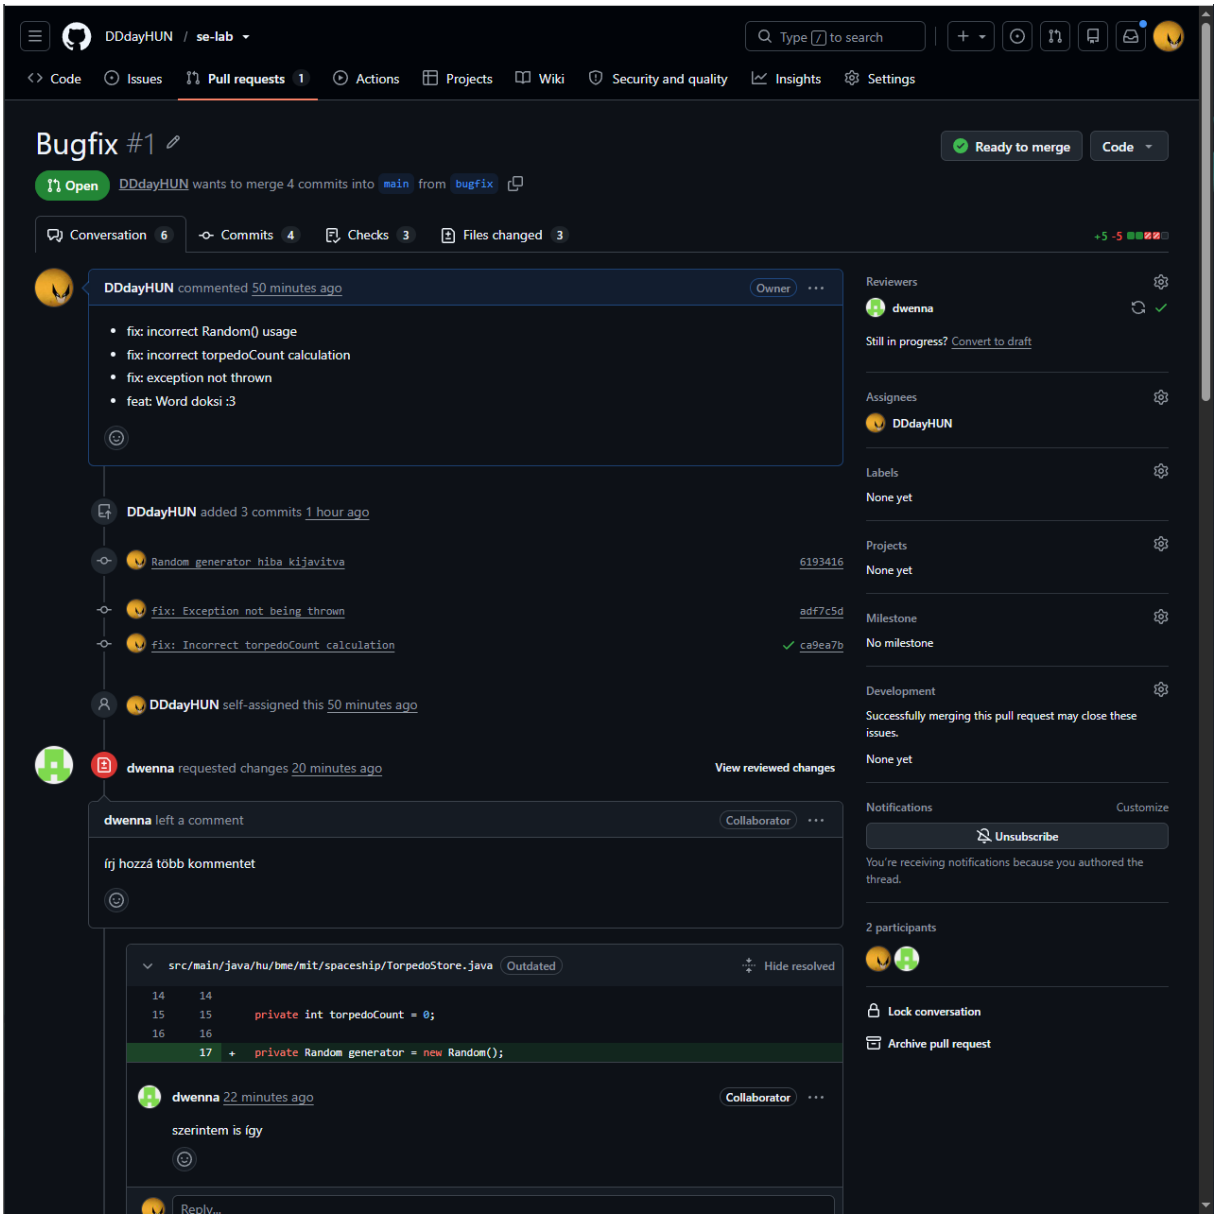

1. List.remove() should not be used in ascending 'for' loop. ---causes element skipping.
2. @NonNull values should not be set to null. --- can caues nullptr exception at runtime if the variable annotated with this is set to null.
3. „==" and „!=" should not be used when „equals" is overriden. --- It is equivalent to use the equality == operator and the equals method to compare two objects if the equals method inherited from Object has not been overridden. In this case both checks compare the object references. (Dokumentációból kimásolva)

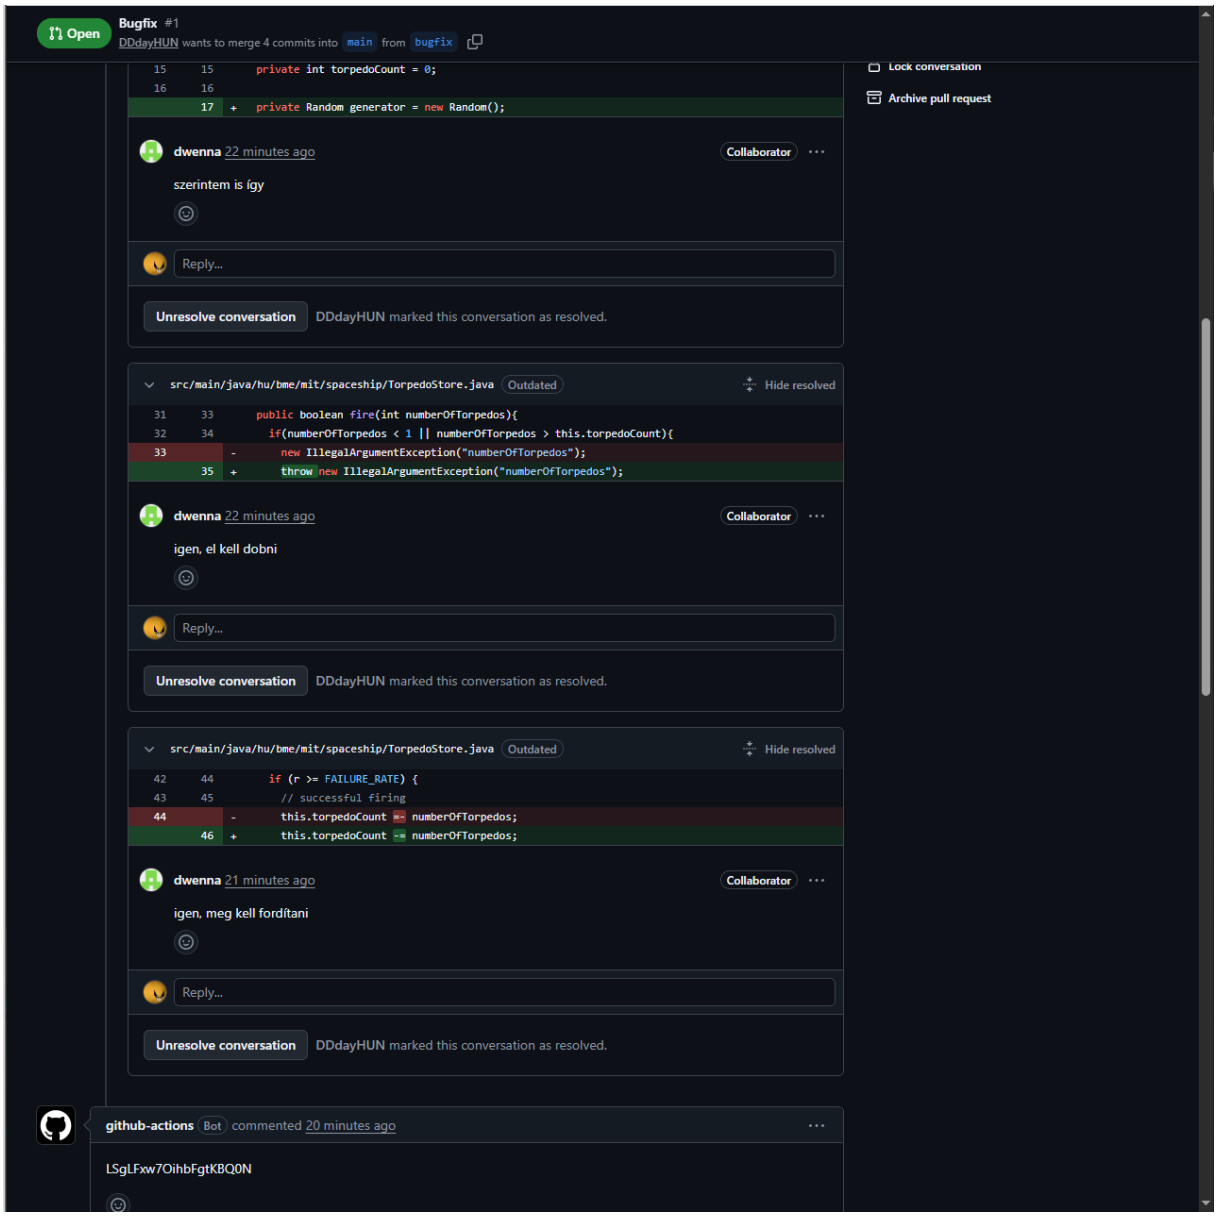

5. Feladat: Kód felülvizsgálat (Code review)

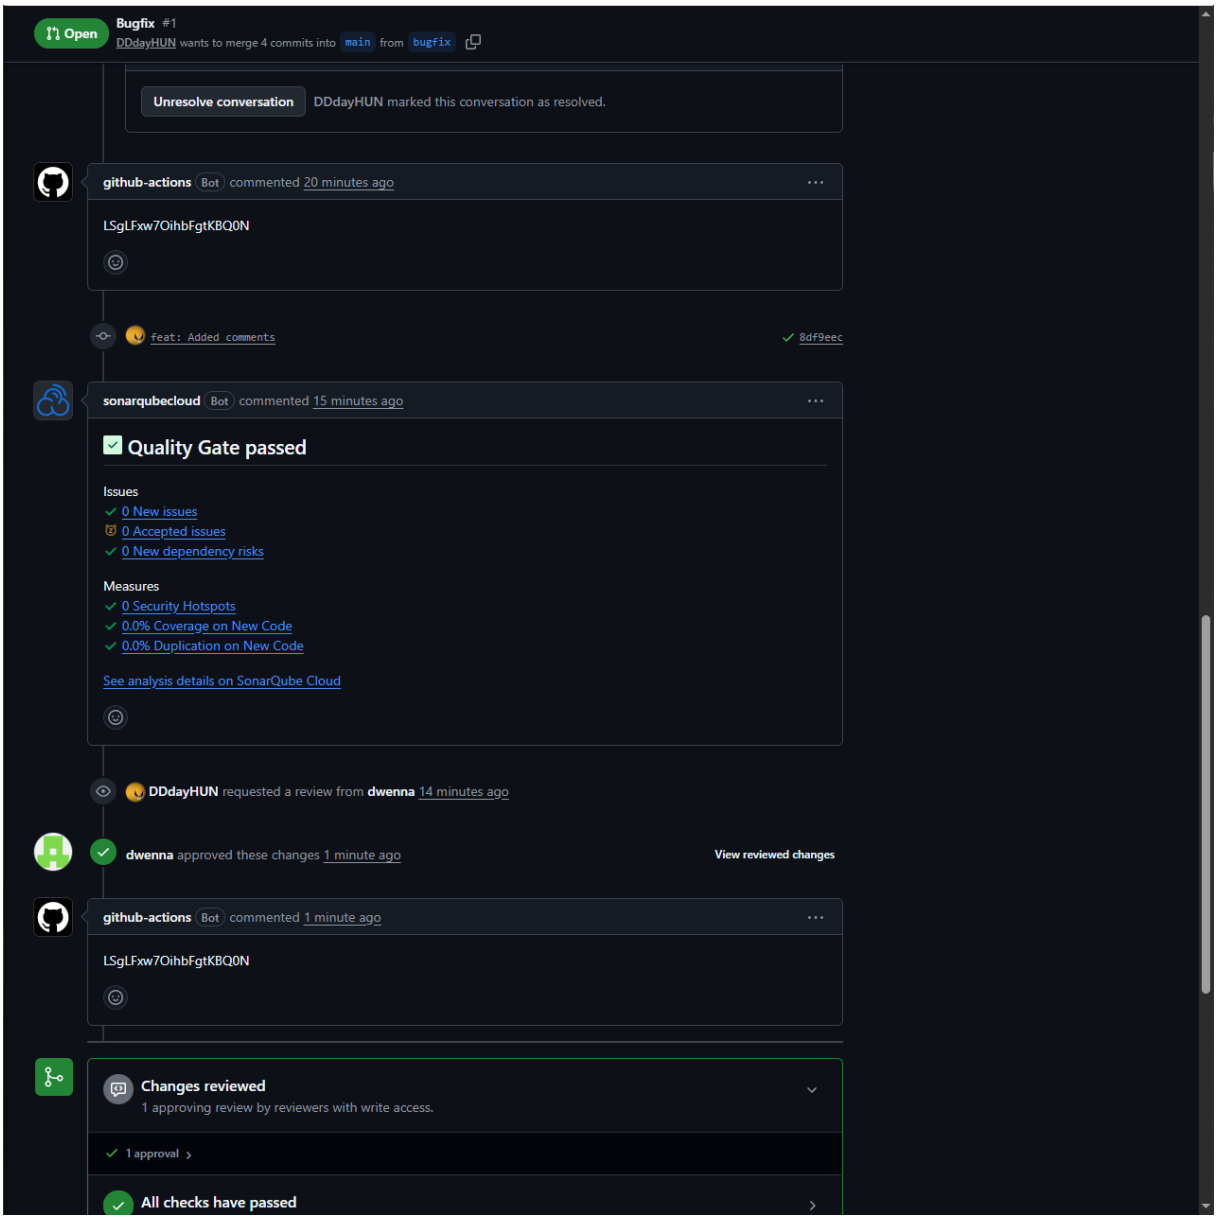

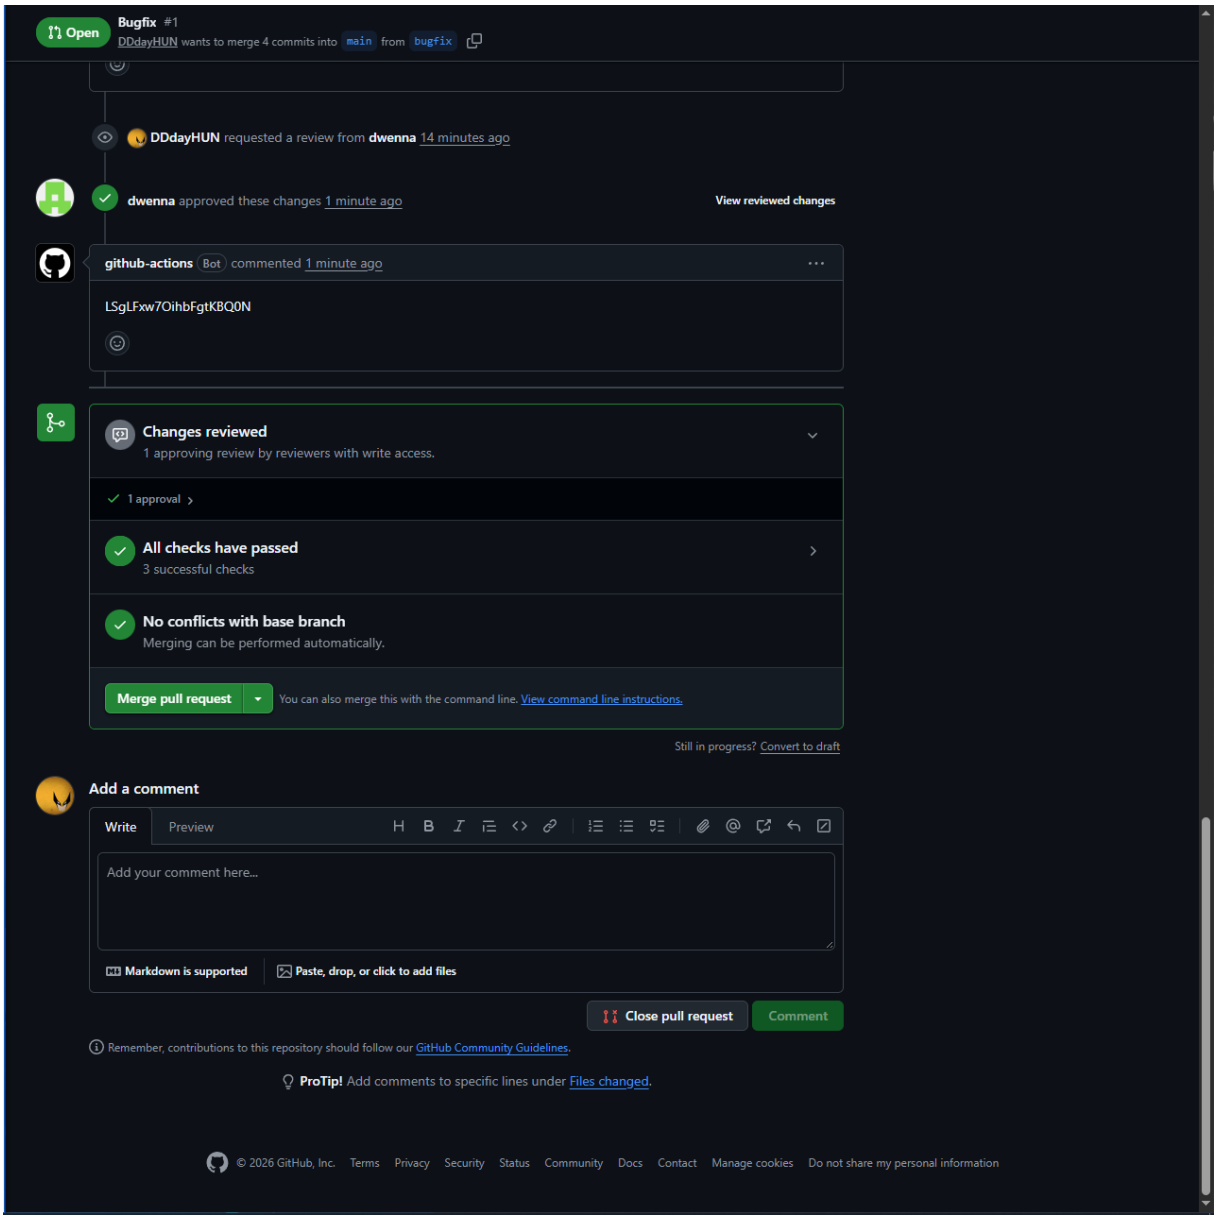

6. Feladat: Átvizsgálás

Én PR:

7. Feladat: SonarQube Cloud (Statikus ellenőrzés CI környezetben)

8. Feladat: Javítások ellenőrzése

`ld. 6-os feladat képek (merge elött)`

merge után:

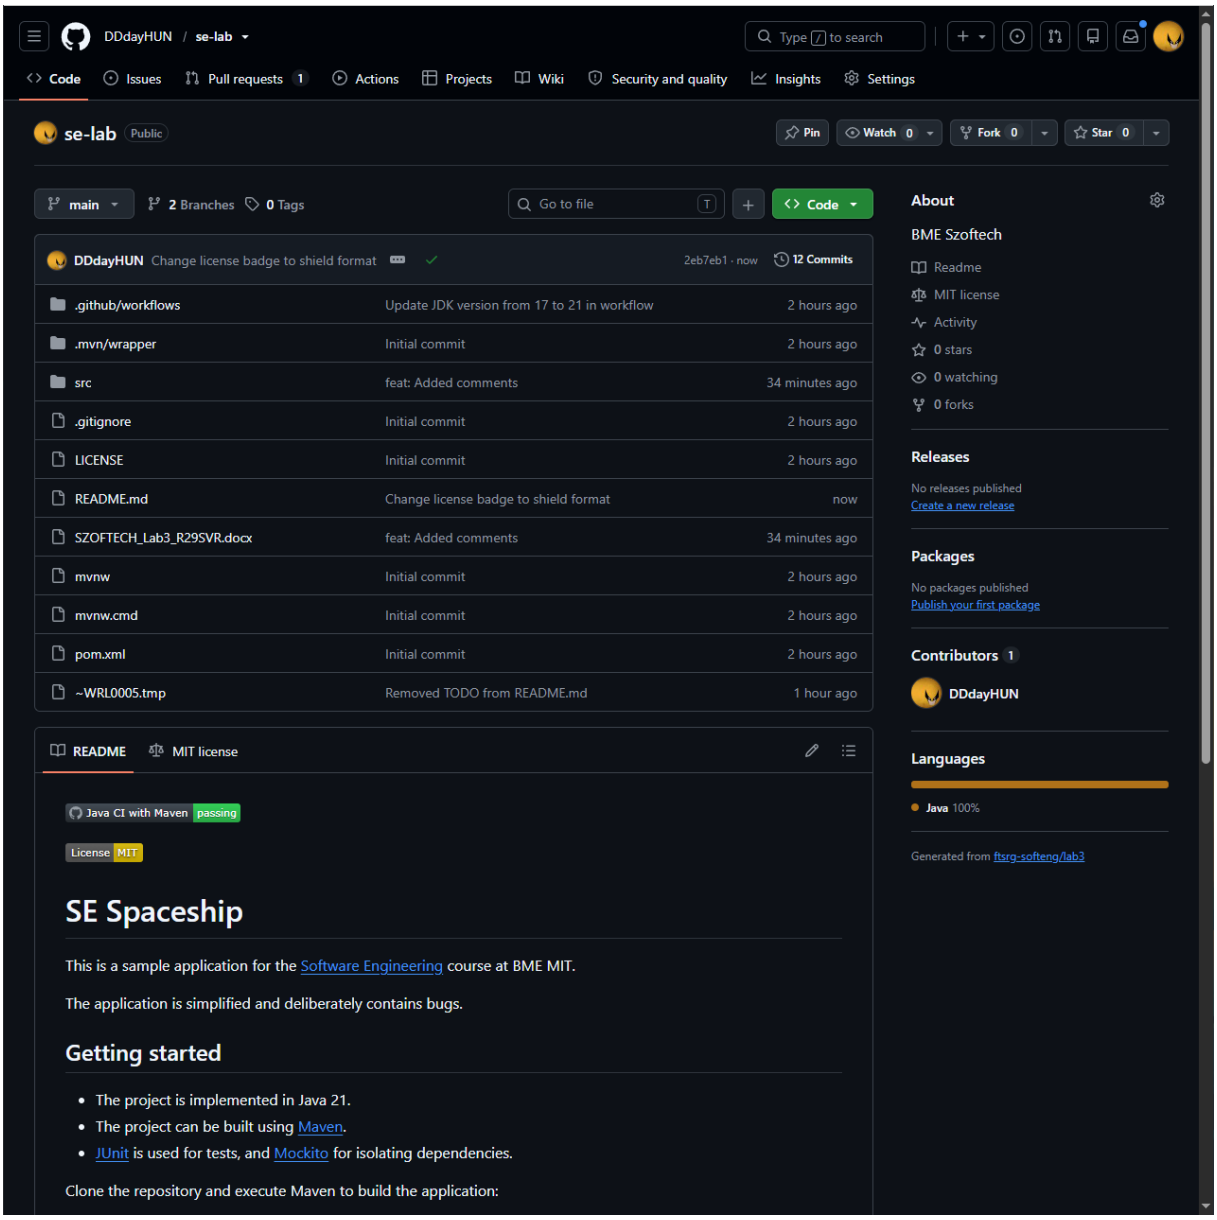

Nem volt extra hiba amit a PR-ra a SonarQube jelzett volna. Vagy a main-ágra a TorpedoStore-on kívül.

9. Feladat: Munkafolyamat jelvények létrehozása

Java CI with Maven passing
License MIT
SE Spaceship
This is a sample application for the Software Engineering course at BME MIT.
The application is simplified and deliberately contains bugs.
Getting started
The project is implemented in Java 21.
The project can be built using Maven.
JUnit is used for tests, and Mockito for isolating dependencies.
Clone the repository and execute Maven to build the application:
